AL-MUHAJIREEN LIBRARY

A quiet place for reading and listening.

Islamic library with a built-in PDF trimmer and audiobook clipper.

Contents

01 Attaching a PDF and trimming it

02 Attaching an audiobook and cutting it

03 Library, player, sharing and downloads

04 Categories: adding, browsing, removing

05 Islamic tools: calendars, Qibla, prayer times

06 Language, theme and privacy

Everything stays in your browser — no account, no upload, no server copy.

Guide generated for this build

01 Attaching a PDF and trimming it

Choose “Attach PDF” from the header or from the home screen. Pick a PDF from your device; it is opened locally in the built-in viewer — nothing is uploaded anywhere.

Trimming works in three steps:

- Preview — the page renders at the current zoom. Use the slider (50% to 300%) to inspect fine print or the margins you want to remove, and the arrows to move through pages.
- Mark the keep area — drag a box over the page. Everything outside the box is shaded out, exactly as it will be removed. A badge shows the kept size as a percentage of the page. “Reset area” clears the box.
- Choose the scope — apply the trim to this page only, to every page, or to a page range. The panel shows how many pages will be kept.

> **Only the trimmed file is saved**
>
> Saving writes a brand-new cropped PDF and stores just that copy. The original file is discarded when the dialog closes, so the library never accumulates untrimmed duplicates.

Each saved PDF keeps its title, author, category and page count, and can be re-opened in the reader at any time.

02 Attaching an audiobook and cutting it

“Attach audio” accepts MP3, WAV, OGG and other formats your browser can decode. The file becomes a waveform you can clip precisely.

- Drag either handle on the waveform to set the start and end point; the selection is highlighted in the green accent and moves with you.
- Zoom from 1x to 16x to place a cut on a single word or breath. The readout shows start, selection length and end; “Preview trim” plays only the part you are keeping.
- Switch “Save without trimming” to keep the whole recording and only choose its category — useful for formats a browser cannot decode (some M4A files), which can still be stored and played.

> **Trimmed audio is exported as WAV**
>
> The clip is rendered at the source sample rate and encoded in the browser, so there is no server step. Long cuts produce large WAV files; untrimmed saves keep the original bytes and format.

03 Library, player, sharing and downloads

Audiobooks appear with a circular green player sign — the same motif as the mini player. PDFs appear as a stack of pages with their page count. Every card shows whether it is a trimmed copy or a full-length file.

- Tap the disc to play; the ring spins while audio runs and the mini player appears at the bottom with a scrubber and time.
- The open-book icon on a PDF card opens the reader, with the same zoom control.
- Share sends the trimmed file through the device share sheet where available (files, not just links); otherwise it downloads instead.
- Download saves the trimmed PDF or audio file directly to the device. Both actions always act on the trimmed result.
- Delete removes the book from this browser after a confirmation prompt.

04 Categories: adding, browsing, removing

Six categories are ready on first run: Qur’an, Hadith, Fiqh, Seerah, Tafsir, Duas & Dhikr. They are stored bilingually, so they read correctly in both English and Arabic.

- Add a category from Browse — type a name and press Add. New categories are available immediately in both trimmers.
- Remove a category with the bin icon on its tile. Its books are moved to another category rather than deleted, and the last remaining category cannot be removed.
- Browse lists every category with its book count; tapping one opens the library filtered to it. The chip row above the library grid does the same.

05 Islamic tools

Open “Islamic tools” in the header (or the tools banner on the home screen). Calendar, Qibla and prayer times now share one menu with three tabs.

- Calendar — Hijri (Umm al-Qura), Gregorian and Ethiopian dates shown together for today, with a date picker to look up any other day.
- Qibla — the great-circle bearing from your coordinates to the Kaaba, shown on a compass dial. “Enable compass” uses the device magnetometer (permission is requested on iOS) and the dial turns with you; “Use my location” fills the coordinates.
- Prayer times — Fajr through Isha for five calculation methods (MWL, ISNA, Egypt, Umm al-Qura, Karachi), with the next prayer highlighted and a live countdown.
- Verse and hadith of the day rotate automatically, with Arabic text, an English rendering and the reference.

06 Language, theme and privacy

- Arabic and English switch the whole interface, including right-to-left layout and typography.
- Light and dark themes can be changed from the header or from Settings.
- Settings also holds the prayer method, coordinates and a storage counter.
- All books, categories and audio live in IndexedDB inside this browser profile. There is no account

and no server copy, so clearing site data removes them.

Al-Muhajireen Library

Trim first, keep only what you saved.
